LEGACY HACKED ETHIOPIC FONT SIMULATION

Underlying ASCII text: ’b#mjm-rya qal nbr; qal-m b#Egziabher z#nd nbr’

Intended visual reading: ’[Amharic: BeMijemeriya Qal Nebere...]’

FAILURE DOCUMENTATION FOR READLOOP:

1. Clipboard Copy: User copies text -> Pastes unintelligible ASCII junk.

2. Full-Text Search: Searching Ethiopic Unicode yields 0 results.

3. Text-to-Speech (TTS): Reads English phonetic noise instead of Amharic.

Verdict: ReadLoop must detect ASCII-hacked PDFs and prompt OCR or Unicode remapping.
